

Monkey Epidermal Primary Keratinocytes

Cat. No.: CC7F929

Product Type: Animal Cells and Cell Lines

Product Overview

Monkey epidermal primary keratinocytes are isolated from the monkey skin tissue. After isolating and culturing these cells, the primary cells are cryopreserved, demonstrating high viability and activity. Monkey epidermal primary keratinocyte products are utilized in various standard biochemical procedures, such as PCR, western blot analysis, immunoprecipitation, and flow cytometry, for scientific research purposes. They are also used to characterize cellular products and derivatives required for scientific research, as well as to explore cell-cell interactions

Specifications

Cell Product Type	Primary Cells
Species	Monkey
Cell Type	Epithelial Cells
Source	Skin
Growth Information	Adherent; 37°C; 5%CO ₂
Quality Control	Mycoplasma (-); Bacteria (-); Yeast (-); Fungi (-)
Physical State	Frozen cells

Shipping and Storage

This product is shipped with dry ice. It's recommended to store the product with liquid nitrogen and never in a -20 °C or -80 °C refrigerator. Avoid repeated freezing and thawing of the product.

The product is for research use only. Not for commercial, prophylactic, diagnostic, or therapeutic applications. Please determine the purpose of the product before purchasing. For further information and inquiry, please contact us.
