

Equine Primary Hepatocytes

Cat. No.: CCEL201

Product Type: Animal Cells and Cell Lines

Product Overview

Equine primary hepatocytes are isolated from equine liver tissue. After isolating and culturing these cells, the 0 generation cells are cryopreserved, demonstrating high viability and activity. Equine primary hepatocyte products are utilized in various standard biochemical procedures, such as PCR, Western blot analysis, immunoprecipitation, and flow cytometry, for scientific research purposes. They are also used to characterize cellular products and derivatives required for scientific research.

Specifications

Cell Product Type	Primary Cells
Species	Equine
Cell Type	Hepatocytes
Source	Liver
Growth Information	Suspension; 37°C; 5%CO ₂
Quality Control	Mycoplasma (-); Bacteria (-); Yeast (-); Fungi (-)
Physical State	Frozen cells

Shipping and Storage

This product is shipped with dry ice. It's recommended to store the product with liquid nitrogen and never in a -20 °C or -80 °C refrigerator. Avoid repeated freezing and thawing of the product.

User Note

The product is customized. Please contact info@biovenic.com for more detailed information.

The product is for research use only. Not for commercial, prophylactic, diagnostic, or therapeutic applications. Please determine the purpose of the product before purchasing. For further information and inquiry, please contact us.
